Naval Research Laboratory

Postdoctoral positions are available within the informatic phenomena group at the Naval Research Laboratory in Washington DC. These positions are administered as awards through the National Academy of Sciences with a current salary in excess of \$65,000 per year.

The initial appointment is for two years. Generous funds for travel and equipment are available. These are pure research positions with no additional duties of any kind. Applicants must be either citizens or legal permanent residents of the United States.

The informatic phenomena group consists of researchers with interests in mathematics, computer science, theoretical and experimental physics, chemistry, engineering, artificial intelligence and security. It offers many opportunities for interdisciplinary collaboration. Accordingly, candidates with background in at least two of the following are sought: general relativity, quantum mechanics, information theory, computer science, topological algebra, domain theory, differential geometry. A healthy disregard for convention is also required.

Please send a CV and copies of recent work to keye.martin@nrl.navy.mil for initial consideration.
